

Round control valves with thermal motor type KRK-E

Round control valves with thermal motor, opened when under current

Application

- For air regulation in ventilation and airconditioning systems, cookerhoods, ...
- Limited time under current of max. 12 hours
- Max. Use temperature 60°C

Material

- Valve and housing made of fire retardant plastics
- Connections at both sides of the valve made of galvanized steel

Colour

- Black housing and valve
- Galvanized steel duct connections

Composition

- Round body with valve
- Electrical connection box containing the gear mechanism and thermal motor.
- duct connection flanges

Mounting

- To be mounted in between two round ducts
- Connected to current 230V by 2 wires

Text for tender

- The air regulation valves shall be of the round type in fire retardant plastics, equipped with a thermal motor. The valve will open at a current of 230V and will automatically close when there's no more current. The valve will have two round duct connections in galvanized steel.
- ATC Type **KRK-E**
